Listing of Claims:

1. (Previously presented) A method for preventing to form a spacer undercut in SEG Pre-clean process, comprising:

providing a semiconductor substrate;

forming a gate structure on said semiconductor substrate;

forming a spacer of double-film structure on a side-wall of said gate structure, wherein said spacer of double-film structure comprises a first spacer and a second spacer, said first spacer being formed between said side-wall of said gate structure and said second spacer;

removing a portion of a surface of said semiconductor substrate by using a DHF (hydrofluoric acid diluted in deionized water) solution to remove a native oxide layer on said surface of said semiconductor substrate; and

etching said first spacer and said second spacer, wherein an etching rate of said second spacer is faster than an etching rate of said first spacer.

- 2. Canceled.
- 3. (Previously presented) The method for preventing to form a spacer undercut in SEG Pre-clean process according to claim 1, wherein a volume ratio for hydrofluoric acid to deionized water is about 1:10 1:100 in said DHF solution.
- 4. (Previously presented) The method for preventing to form a spacer undercut in SEG Pre-clean process according to claim 1, wherein etching said first spacer and said second spacer comprises a HFEG (HF diluted by ethylene glycol) solution is utilized.

5. (Original) The method for preventing to form a spacer undercut in SEG Pre-clean process according to claim 4, wherein a volume ratio for hydrofluoric acid to ethylene glycol is 0-4% in said HFEG solution.

• •

6. - 7. Cancelled

- 8. (Original) The method for preventing to form a spacer undercut in SEG Pre-clean process according to claim 1, wherein said first spacer comprises silicon dioxide.
- 9. (Original) The method for preventing to form a spacer undercut in SEG Pre-clean process according to claim 8, wherein said second spacer comprises silicone nitride.
- 10. 18. Cancelled.
- 19. (Previously presented) The method for preventing to form a spacer undercut in SEG Pre-clean process according to claim 1, wherein formation of said raised source/drain is formed by selective epitaxial growth (SEG) method.
- 20. (Currently amended) A method for preventing to form a spacer undercut in SEG Pre-clean process comprising:

providing a semiconductor substrate;

forming a gate structure on said semiconductor substrate, wherein said gate structure comprises a gate oxide and a polysilicon gate electrode, said polysilicon gate electrode on said gate oxide;

forming a first spacer comprises comprising silicon diozide on a side=wall of said polysilicon gate electrode and said gate oxide;

forming a second spacer comprises comprising silicon nitride on a side-wall of said first spacer;

performing a first Pre-clean process, using a DHF solution to clean a surface of said semiconductor substrate;

performing a <u>second</u> [[HFEG]] Pre-clean process, using a HFEG solution to clean a portion of said surface of said semiconductor substrate and a portion of said first spacer and a portion of said second spacer; and

≟ •

forming a raised source/drain on said surface of said semiconductor substrate.

- 21. Cancelled.
- 22. (Original) The method for preventing to form a spacer undercut in SEG Pre-clean process according to claim 20, wherein a volume ratio for hydrofluoric acid to ethylene glycol is 0 4% in said HFEG solution.
- 23. (Original) The method for preventing to form a spacer undercut in SEG Pre-clean process according to claim 20, wherein said raised source/drain is formed by selective epitaxial growth (SEG) method.
- 24. (Original) The method for preventing to form a spacer undercut in SEG Pre-clean process according to claim 23, wherein said selective epitaxial growth (SEG) method for said raised source/drain is selected from a group consisting of low pressure chemical vapor deposition and ultra-high vacuum chemical vapor deposition.
- 25. (Original) The method for preventing to form a spacer undercut in SEG Pre-clean process according to claim 23, wherein said raised source/drain comprises epitaxial silicon.
- 26. Cancelled.
- 27. (Currently amended) The method for preventing to form a spacer undercut in SEG Pre-clean process according to claim [[26]] 20, wherein a volume ratio for hydrofluoric acid to deionized water is about 1:10 1:100 in said DHF solution.
